

Thank you for your purchase, we are confident that you will be pleased with the quality of our product.

Kickstand Installation Instructions

1996-2001 Yamaha YZ125/250 (2-strokes)

1998-2005 Yamaha YZ250/400/426/450 (4-strokes)

To install your new kickstand:

1. Remove the lower chain roller and bolt, make sure you keep track of the order of the small parts for re-assembly. Remove the sub-frame to main-frame bolt.
2. Install the kickstand on the bike using the provided M8X 30mm flat head bolt. Re-Install the chain roller using the provided M8 X 80mm socket head bolt, if the bolt is too long cut it off with a hacksaw or die grinder. We recommend using a removable thread locking agent on the bolts.
3. Make sure that you tighten all bolts to the correct torque.
4. Periodically check the pivot bolt for tightness.

Maintenance: Clean and lubricate the kickstand pivot area after each ride. We recommend using a penetrating lube, such as WD-40. If necessary, you can remove the back cover plate for additional cleaning.

CAUTION: We do not recommended starting the bike with the kickstand down, as this may cause damage to the kickstand.
